ABOUT OUR SPECIAL OFFER FOR INFOCOMM ATTENDEES!

More than 60 percent of American businesses outsource their design services from basic programming to CADD to complement existing operations and increase profitability. Why aren't you doing the same?

When you outsource to Analytix, you partner with an experienced team that specializes in the design and installation of sophisticated Audio-Visual (AV) systems. We can convert conceptual 'napkin' design drawings into detailed schematic plans including comprehensive system interconnection and signal flow for use by any professional installation crew.

Analytix is proud to support clients with robust web-based technologies and highly sophisticated job management tools. Clients are able to conveniently submit, monitor and modify AV designs. Once submitted, our highly trained CADD designers complete work efficiently and ensure you stay on-time and on-budget.

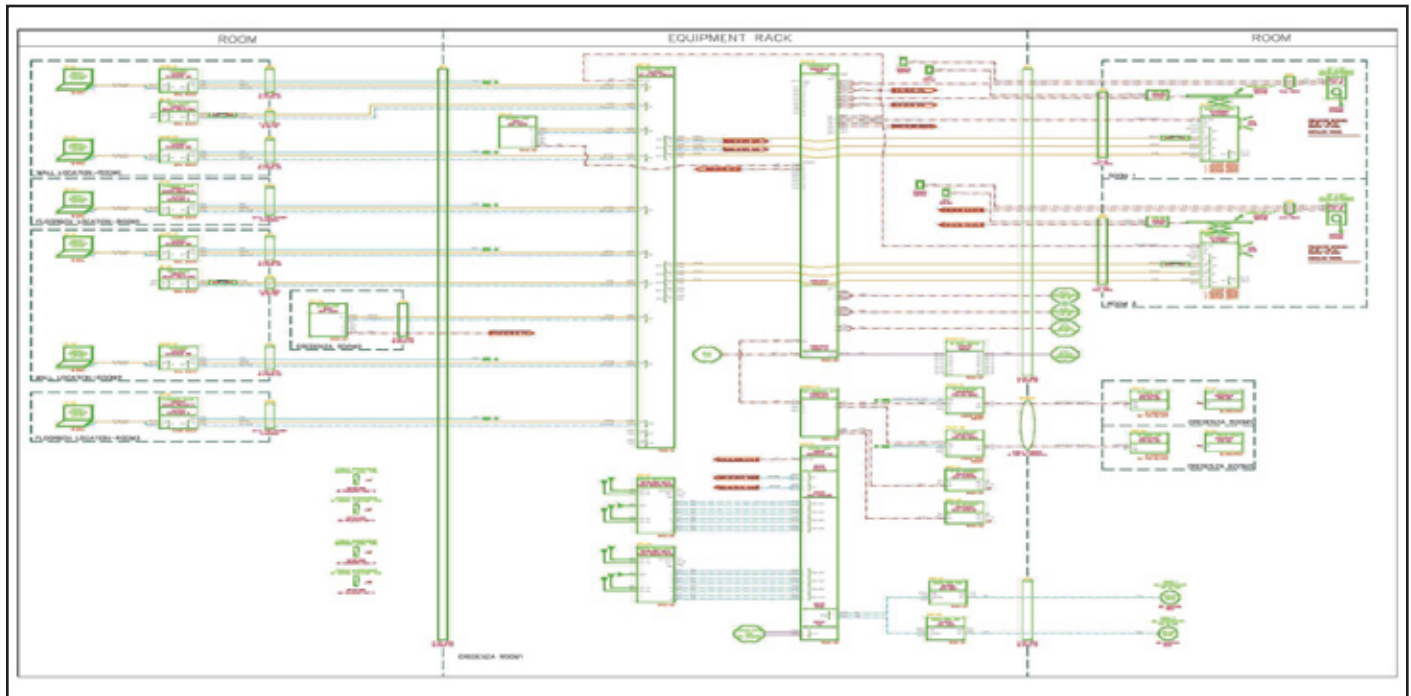

- ▶ **Conceptual Design Drawings:** Analytix can develop basic line drawings to denote signal flow and general concepts. Conceptual design drawings are an outstanding pre-sales tool when finalizing your solution with end-users
- ▶ **Schematic Drawings:** Our experienced designers can create basic to advanced line drawings to accurately describe detailed system interconnection and signal flow
- ▶ **As-Built Documentation:** Analytix provides complete documentation for installed systems or facilities combining all changes and updates
- ▶ **Cable and Conduit Riser Diagrams:** Gain specialized expertise when developing AV cables origination and destinations drawings imposed over Architectural CADD documents
- ▶ **Equipment and Custom Plate Detail Drawings:** Analytix provides sophisticated drawings, diagrams, schedules and other data to meet its customer's needs
- ▶ **Construction Drawings and Documents:** Work with talented designers able to render detailed drawings and documentation regarding technical information such as dimensions, schedules and referenced large-scale details
- ▶ **Rack Elevation:** Analytix drawings portray the placement of AV and related equipment within an enclosure
