

## CUSTOM SOFTWARE DEVELOPMENT

### Custom Software Developed by Us, Specifically for You

As a company dedicated to helping small and mid-size businesses, Analytix Solutions provides customized software development as part of our service offerings.

Customized software development allows you, the business owner, to meet your clients' requirements without spending money on traditional resources, including infrastructure and hiring additional staff. It is developed to serve your particular needs and offers more flexibility than off-the-shelf software packages.

Custom software is often used for specific functions within an organization, such as management of inventory. It also saves time and resources, and it offers more flexibility than tailoring existing software packages.

The stages involved in custom software development include the following:

- ▶ Identifying requirements and researching how best to meet them
- ▶ Designing a concept that would best meet the requirement
- ▶ Implementing the design
- ▶ Testing
- ▶ Resolving issues
- ▶ Conducting regular maintenance

Call us today for a FREE analysis of your company's current and proposed technology requirements.

### Benefits

Developed for specific client needs

Less problematic than off-the-shelf solutions

Fewer software "bugs"

Flexibility in design

Improved productivity

*"I have been most impressed by the way Analytix platforms their technology. Their Web Portal is amazing and brings a whole new level of service to my business. It provides me with a better way to manage my company. I can leverage this technology to move my business forward, which as a small business I would not have been able to afford to do otherwise."*

**Daniel Budd**, Executive Chef, Owner  
TASTE BUDDS, INC.

### About Analytix Solutions

Businesses who are positioned for growth turn to Analytix Solutions for scalable, single source, business solutions. We provide small to mid-sized businesses with a full range of accounting services, ranging from bookkeeping to CFO services, in addition to accounting systems automation and integration.
